

Final Project Presentation

By Marc Andre Lam

Site Idea

My idea for my site was to make a personal blog documenting some of the places I've been. It's titled 1519 because that was the street number of my childhood home.

Code Snippet

My goal for this project was to focus on GSAP animations to add some fun functionality to the site. One of the animations I really enjoyed playing around with was the scrollTrigger plugin that allowed me to make the shrinking landing page.

```
.container{
  min-height: 100vh;
  display: flex;
  justify-content: center;
  align-items: center;
}

.mask{
  height: 100vh;
  width: 95%;
  display: flex;
  flex-direction: column;
  justify-content: center;
  background-image: url(./img/bluesky.jpg);
  z-index: 2;
}
```

```
gsap.to(".mask", {
  scrollTrigger: {
    trigger: "#scrollOpen",
    scrub: true,
    pin: true,
  },
  scale: .7,
  height: 200,
});
```

Things I Learned for This Project

- GSAP TextPlugin
- GSAP ScrollTrigger

Next Steps

- Fleshing out the CSS now that I have the main animations I want implemented
- Adding the pages for each blog entry

Thanks!
